

# STERIGEST TRACKING SYSTEM

*A Simple and user friendly modular system*

**Sterigest** is the only tracking system compatible with the **Calivac** independent sterilisation cycle monitoring device.

The **Sterigest / Calivac** partnership is the best quality assurance system available to fully integrate the cycle control with traceability.

**Sterigest** was developed in 1997 in collaboration with two major hospitals in order to provide a system that is capable of providing a complete tracking and traceability system for any steam sterilised packs or instruments.

The **Sterigest** system was conceived by the people who actually need to use the system on a day to day basis rather than by computer / IT specialists.

The major advantages of the **Sterigest** system are its simplicity and ease of use coupled with its capability to be adapted to the individual need of the user.

Bar Coded labels are used to individually identify each item being processed and tracked.

**Sterigest** allows the retrieval of the complete product / pack history in real or deferred time. Access to this information allows answers to the following questions:

- Who packed the product.
- How was the product packed. When was the product packed and processed.
- Which sterilise was used. Who or which department used the pack.
- The name of the patient treated with the pack contents.

### **Better understanding and control of costs**

By using the **Sterigest** integrated management system it is possible to analyse the consumption of materials and throughput in the CSD. The information can be retrieved by product name, by the users name, the date and any other parameters. Specific menus in the **Sterigest** system software allow the sterilisation cycle report to be linked to the traceability data.

## LOADING

Staff Identification

## DISTRIBUTION

Staff Identification

Steriliser and cycle type identification

Identification of receiving unit

Load Registration

Registration of products to be distributed

### Modular system

The configuration of the **Sterigest** system can be adapted to suit the individual needs of the CSD.

The **Sterigest** system configuration is PC based and can be supplied with the necessary hardware or it can be added to the departments existing IT system.

The complete **Sterigest** system consists of:

- **Sterigest & Calivac** software.
- Thermal label printer.
- Report printer.
- Cordless bar code reader with LCD screen.
- Connector to Heatsealer unit.
- Possibility to link to network including patient record system.
- Possibility to connect to **Calivac** probes.
